This is a copy of UCI ML Wine recognition datasets.

<https://archive.ics.uci.edu/ml/machine-learning-databases/wine/wine.data> (<https://archive.ics.uci.edu/ml/machine-learning-databases/wine/wine.data>)

The data is the results of a chemical analysis of wines grown in the same region in Italy by three different cultivators. There are thirteen different measurements taken for different constituents found in the three types of wine.

The data was used with many others for comparing various
 classifiers. The classes are separable, though only RDA
 has achieved 100% correct classification.
